

MESSAGE CENTERS & ANNUNCIATORS

These multi-color message centers are indoor rated and display 4", 2.1" and 5" high characters. They can be controlled using PC software (provided) or an easy-to-use infrared remote programmer. An optional Ethernet device can be used to network the displays into a facility wide communication system. When networked, individual message centers with a specific address can receive a discrete message or a general broadcast message can be sent to all the message centers in the network.

Included are brackets and hardware that allow for wall or ceiling mount. The message centers are designed for indoor use in an industrial, retail, government or educational facility, or anywhere communication is important. These units can display production goals, company announcements, safety messages and boost employee moral. They can be used in a retail environment to inform customers of product specials, store hours and promotions. Educational facilities can display facility meetings, school activity schedules and student messages.

Hand Held Remote Programmer

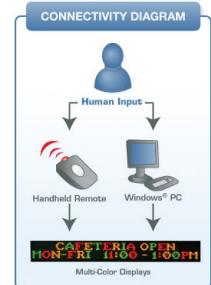

A hand held remote control keyboard with easy to understand programming instructions is supplied with each EDI Message Center. Batteries included.

Models Include

- Infrared message loader with batteries
- 15 ft. RS232 data cable
- Wall or ceiling mount brackets
